M. Shebulan Joshwel

Data Scientist Intern

+94 76-801-9672 | jshebulan@gmail.com | https://www.linkedin.com/in/shebulan-joshwel/

I am a motivated student with a strong background in Information Technology and a deep passion for volunteering and community service. Throughout my academic journey, I have actively sought opportunities to contribute meaningfully, from attempting to join WIE (Women in Engineering) and AIESEC at SLIIT to engaging in initiatives that promote youth empowerment, education, and mental health awareness.

Education

Sri Lanka Institute of Information Technology (SLIIT) – Malabe, Sri Lanka

- *Bachelor of Science in Information Technology Specialized in Data Science* *July 2024-Present* **St. Benedict's College, Colombo**
- *G.C.E (A/L) Physical Science Stream* *B & 2S* *2020– 2023*
- *G.C.E (O/L)* *7A &2B* *2019– 2020*

Projects

Multi-Agent Stock Analysis & Trading Pipeline - CrewAI

·Built a CrewAI-powered multi-agent system that analyzes live stock data and makes trading decisions in real time.Analyst Agent interprets market trends and Trader Agent recommends Buy or Sell. Integrated with Yahoo Finance API for live data, modular tasks, and reproducible workflows.

LSTM Sentiment Classifier for Movie Reviews

·Built an end-to-end NLP pipeline that classifies movie reviews as positive or negative using an LSTM neural network. The project covers data ingestion and cleaning with Pandas, train/test splitting and preprocessing, tokenization and embedding layers, LSTM sequence modeling, and final dense layers for prediction. Implemented the model in Keras

Autism Prediction Pipeline

· Built a machine learning pipeline to predict autism using multiple classifiers (Decision Tree, Random Forest, XGBoost). To ensure fair and balanced predictions, class imbalance was addressed using SMOTE (Synthetic Minority Oversampling Technique)

Minecraft-style Sandbox Game in Python

· A playful Minecraft-style sandbox game built in Python using the Ursina engine.Features include WASD movement, Shift to jump, block placement with left click, and block destruction with right click. Gravity is intentionally infinite (fall endlessly) as a

fun design choice — walls can be added if required. Created for experimentation with Ursina's first-person controller and block mechanics.

Generative AI Chat-Bot

· Built a Generative AI Chatbot with Streamlit + LangChain Groq, featuring a sleek chat interface, persistent history, and realtime responses powered by the llama-3.3-70b-versatile mode

Skills

Programming: Python, SQL, Java, R

Tools & IDEs: IntelliJ, PyCharm, Spyder, Jupyter Notebook, Google Colaboratory

Data Analysis: Pandas, Numpy, SciPy, TensorFlow, PyTorch

Data Visualization: PowerBI, Matplotlib , Seaborn

Certificatons

Exploratory Data Analysis for Machine Learning – https://coursera.org/verify/5PXSJKHN39AO

AI/ML Engineer - Stage 1 - https://code.sliit.org/certificates/j8g6qkpxkh

AI/ML Engineer - Stage 2 – https://code.sliit.org/certificates/ww4kytw4o
